Technology Partners leads EmSense \$9M funding

Silicon Valley / San Jose Business Journal

Technology Partners led a \$9 million round of funding for **EmSense Corp.**, the company said Tuesday.

Palo Alto-based Technology Partners was joined in the third round by an existing investor, Boulder, Colo.-based **Foundry Group**.

San Francisco-based EmSense is a neuroscience company that applies advances in EEG and other neurometrics.

EmSense said the funding will be used for global expansion in support of its market research partners. The funds will also enable the company to develop a large bio-sensory in-home panel, which EmSense said will be the first of its kind.
